

Steps to sign-up:

1. Sign up on <https://allocations.access-ci.org/>
2. After that's done, you'll get a mail with this:
 - a. Setting your initial PSC password: <https://apr.psc.edu>

Steps to login:

You'll need 2 Terminal shells (the ones you need to work with are green)

The parts of commands marked with grey are ones you'll need to edit as per your details

Step	Terminal 1	Terminal 2
1	ssh <your_username>@bridges2.psc.edu	
2	cd /jet/home/<your_username>	
3 (IMP)	interact -p GPU-shared --gres=gpu:v100-32:1 -t 1:00:00 -A cis250019p	
4	module load AI/pytorch_23.02-1.13.1-py3	
5	conda deactivate	
6	conda activate <path_to_your_virtual_environment>	
7	hostname	
8	jupyter notebook --no-browser --ip=0.0.0.0	
9 (IMP)	(this terminal is now blocked but DO NOT CLOSE IT)	ssh -L 8888:<hostname>:8888 bridges2.psc.edu -l <your_username>
		(Run any command you want here)

1. More about step 3
 - a. interact -p GPU-shared --gres=gpu:v100-32:1 -t 1:00:00 -A cis250019p this the amount of time (this sets it to 1 hr) you'll be using the GPU for. Be frugal and efficient with it!
2. More about step 6:
 - a. You can use another port if your local 8888 is busy or on the host it's busy. In all likelihood it'll not be
 - b. <hostname> is the one you get from step 6; it'll be like a web address starting with vXXX...

MISC:

- If you're on multiple projects, select the right one:
 - `change_primary_group <ChargeID>`

Guide for vscode:

<https://www.psc.edu/resources/bridges-2/user-guide/#vscode>

PSC Issues SOP

General guidelines:

1. PSC, like any cloud instance, has intermittent issues; So answer most of the times will be, "try again later!"
2. It also would be new to a majority but fret not. Follow the instructions line by line

Steps to report an issue:

1. You got an issue, no problem, let's start
2. Re-run the steps on a fresh terminal, take screenshots of each step and copy the contents of this entire terminal. (that's why, ensure the terminal is fresh!)
3. Put up the screenshots on this [drive](#).
 - a. Find the folder your process got stuck on, Step1-6; Open the right one
 - b. Create a folder in there with the naming convention `<FirstName_LastName>_YYYYMMDD`
 - c. Add the screenshots and the terminal output as a .txt file
4. Send a message to #PSC; We'll try to resolve it ASAP but no guarantee on TAT, we're students too :)
 - a. Add tag "[P1]" to your message when you post it
5. Try your steps again in 6-24 hours.
 - a. Record these the same way as previous steps
 - b. Upload these steps as a subdirectory in your original directory
 - i. So `<FirstName_LastName>_YYYYMMDD/Retry/*`
6. Re-ping the channel if you've not received a response from us for 24 hours
 - a. Add tag "[P0]" to your message when you post it this time
 - b. Reply to your P1 message for this one
